Olist Marketplace

Executive Performance & Growth Analysis

A data-driven review of sales performance, geographic concentration, logistics, and customer retention across the Olist marketplace (2017 – 2018).

Data source: Olist Brazilian E-Commerce Public Dataset • July 2026

What We'll Cover

01

Executive Summary

Headline findings across sales, logistics and customers

02

Business at a Glance

Core KPIs for the full analysis period

03

Sales & Growth Trend

Seasonality and monthly performance

04

Market Concentration

Category and geographic revenue drivers

05

Payments & Logistics

Payment behavior, freight cost, delivery speed

06

Customer Retention

Purchase frequency and loyalty profile

07

Risks & Recommendations

Strategic priorities going forward

Concentrated Demand, Strong Ratings, Low Repeat Purchase

Seasonal Sales Pattern

Revenue and order volume peak from March through August, pointing to a recurring seasonal demand cycle worth planning inventory around.

Category & Geographic Concentration

The top 10 of 74 categories drive 72.6% of orders; the top 10 of 27 states drive 75.4% of revenue — with São Paulo alone at 32.9%.

Delivery Speed Drives Satisfaction

Orders delivered after 21 days see review scores fall sharply — from ~4.3 to as low as 2.4 — while freight runs 14.2% of revenue.

Loyalty Is the Growth Gap

96.9% of customers purchase only once, a 3.1% repeat rate, so a small base of high-value customers carries a disproportionate share of revenue.

Revenue Peaks March–August, a Recurring Seasonal Pattern

Peak: November 2017 (Black Friday) at R\$ 1.37M revenue and 7,451 orders. Growth accelerates into 2018 with sustained monthly revenue above R\$ 1.0M.

Demand Concentrates in a Handful of Categories

72.6%

of all orders come from the top 10 of 74 product categories.

Why It Matters

- Inventory & marketing spend should prioritize these categories.
- Long-tail categories (64 of 74) offer diversification, not volume.
- Category-specific stockouts carry outsized revenue risk.

São Paulo Anchors a Highly Concentrated Map

75.4%

of total revenue comes from just 10 of 27 Brazilian states.

São Paulo (SP)

- Alone contributes 32.9% of total company revenue — the single largest market.
- RJ and MG round out the top 3, together over half of revenue.
- Underrepresented North/Northeast states signal expansion headroom.

Credit Card Dominates How Brazil Pays

Payment Mix Insight

Credit card accounts for roughly 72% of both transaction count and value, reflecting Brazil's strong installment-payment culture ("parcelamento") in e-commerce.

3.1%

Repeat Purchase Rate

Delivery Speed Is the Clearest Driver of Satisfaction

Average customer review score by delivery lead time

14.2%

of revenue is consumed by freight cost (R\$ 2.26M total)

8.1%

of orders are delivered late, but they drag average rating down sharply

Retention Is the Marketplace's Biggest Structural Gap

■ One-Time Buyers ■ Repeat Buyers

What the Data Shows

Purchase Frequency: only 3.1% of customers place a second order — largely a marketplace dynamic driven by durable, low-repeat-purchase products.

Recency: most customers have not purchased in a long time, indicating the active base is smaller than total lifetime customers.

Monetary Value: a small group of high-value customers contributes a disproportionate share of revenue — protecting them is a priority.

Key Risks & Opportunities

RISKS

Revenue Concentration

75% of revenue sits in 10 states and 70%+ in 10 categories — a demand or supply shock there hits disproportionately hard.

Low Retention

A 3.1% repeat rate limits compounding growth and keeps customer acquisition cost the dominant growth lever.

Delivery-Driven Churn Risk

Deliveries beyond 21 days correlate with sharply lower review scores, threatening seller ratings and future conversion.

OPPORTUNITIES

Underrepresented Regions

States outside the top 10 represent expansion headroom with lower current competitive saturation.

High-Value Customer Programs

A small, high-monetary-value segment already exists — formal loyalty and win-back programs can compound it.

Logistics Optimization

Cutting the tail of 22+ day deliveries would lift satisfaction fastest, at a controlled share of total volume.

Four Priorities to Turn Insight Into Growth

1

Plan Inventory to Seasonality

Build purchasing and staffing calendars around the March–August demand peak and the November promotional spike.

2

Protect Delivery Speed

Set a hard target to keep deliveries under 21 days, prioritizing carriers and routes serving the top 10 states.

3

Launch Retention Programs

Target the high-monetary, low-recency segment with win-back offers; test loyalty incentives to lift the 3.1% repeat rate.

4

Expand Beyond the Core

Pilot demand generation in under-represented states and long-tail categories to diversify concentration risk.

Thank You
